

PTECH Canada is always looking for innovative products to assist our customers in their drilling programs thus saving them time and money. That is why we are proud to introduce the latest addition to our product line the **BULLSEYE™ Bit Saver**. Our innovation patent pending centralizer is relatively new to the market but we are excited about the value it offers to our customers.

Our **BULLSEYE™ Bit Saver** is built with 4 spiral blades to keep constant standoff and has 18/24 Tungsten Carbide at the front of the blades to assist in fighting slips. Although it is our recommendation that for optimum performance you use the slip-stream bearing bit from Varel, our **BULLSEYE™ Bit Saver** can be used with any roller cone bit you choose to use. We also target the 450-525 rpm range. Our new centralizer is an ideal product to use with stick or coil tubing.

## Features and Benefits

- Takes bit off casing
  - Reduces heat on bearings
  - Reduces wear on bit gauge
- Centers bit on plug for faster drill times
  - Bit drills softer portion of plug and allows for a sharp cutting face from plug 1 to plug 50
  - Tungsten carbide chews up slip inserts
- Reverse Blade pattern mulches and augers cuttings so that plug parts are fine and easier to lift out of the hole
  - Blades also pull coil along and keeps a consistent WOB

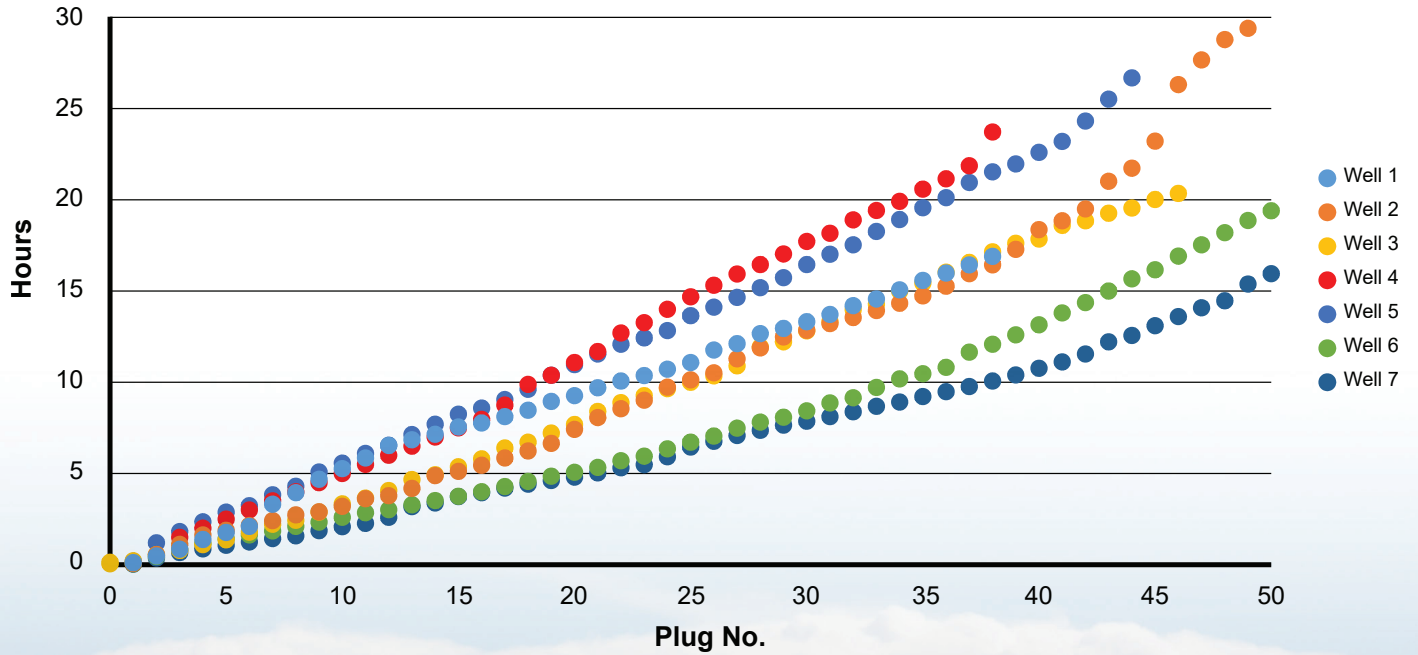

BIT AFTER DRILLING 50 PLUGS

On the reverse side you will find information highlighting some of the run data that we have seen with our new **BULLSEYE™ Bit Saver**. Please contact your local PTECH Canada sales rep to find out how our new product can enhance your drilling program, saving you time and money.
